## What is Amniotic Fluid?

Amniotic fluid contains a multitude of proteins and growth factors. Together they create an extra-cellular matrix to recruit the body's stem cells to reconstruct and regenerate the injured tissue that is causing pain.

## Powerful Treatment

By using AF, arthritis and soft tissue injury patients have another option to repair tissue damage without needing pain masking injections and or surgery.

## Convenient & Painless

15-minute in-office, single injection.

## Donation Source

All Amniotic Fluid is collected aseptically and tested prior to processing and are determined to be eligible for transplantation by Donors Suitability Standards established by the AATB and FDA.

## Healing Term

AF utilizes the body's own healing process, therefore, it can take 3-6 weeks for the patient to feel the full effect.

## Safe, Drug-Free Injection

Contains growth factors and other endogenously synthesized molecules.

## Quick Recovery

Return to everyday, non-high impact activities, within 24-48 hours.

## Sterilization Process

Our proprietary sterilization process ensures product sterility without terminal irradiation, maintaining the original biological makeup of the amniotic fluid.

## Donor Screening

The Amniotic Fluid is obtained during full-term cesarean births from healthy donors who have volunteered their placenta and amniotic fluid. Donation does not require fetal sacrifice.

## FDA Regulated

Our products are regulated under 21CFR Part 1271 and Section 361 of the Public Health and Service Act.
